DESCRIPTION

XTR2N0800 is a family of N-channel power MOSFETs designed to reliably operate over a wide range of temperatures. Full functionality is guaranteed from $-60^{\circ}C$ to $+230^{\circ}C$, though operation well below and above this temperature range is achieved. Fabricated on a Silicon-on-Insulator (SOI) process, XTR2N0800 family parts offer reduced leakage currents while providing high drain currents and low $R_{DS(on)}$. These features allow XTR2N0800 parts to be ideally suited for switching applications. XTR2N0800 family parts have been designed to reduce system cost and ease adoption by reducing the learning curve and providing smart and easy to use features. Parts from the XTR2N0800 family are available in ruggedized 3-lead TO257, 8-lead side brazed DIP and 8-lead SOIC with ePAD. Parts are also available as tested bare die.

APPLICATIONS

- ▲ Reliability-critical, Automotive, Aeronautics & Aerospace, Down-hole.
- ▲ DC/DC converters, power switching, motor control, power inverters, power linear regulators, power supply.
